

The Solar Trailer (R)

Do you wish to fly for absolutely free? It is possible!

Pipistrel is presenting another World's first - the concept of **Flying For Free**.

Pipistrel developed the Solar Trailer(R) which can charge-up the Taurus Electro G2 in as little as 5 hours absolutely free of charge and with zero emissions! Furthermore, when the Taurus Electro G2 is stored in the trailer during the week of bad

The Solar Trailer® offers both the 12 V connections (to charge your aux. instruments, etc) and 110V/220V connections at front and back of the trailer, where you connect the Taurus Electro G2's charger or any other electrical appliance (lights, tools, etc).

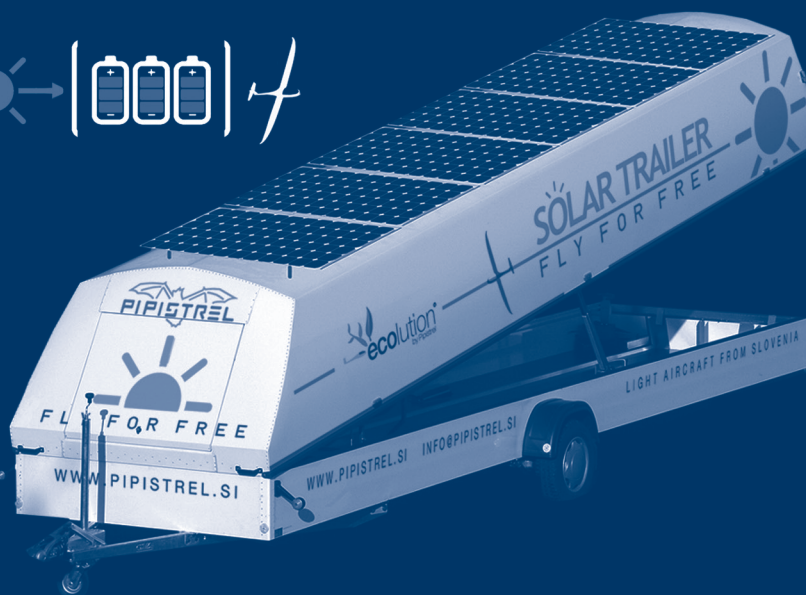

Also present is the solar-system by-pass, so you can charge the aircraft inside the trailer when parked in the hangar/garage, for example. The buffer battery of the trailer has the capacity of 3 kWh and its energy can be transmitted directly into the Taurus Electro G2.

The SolarTrailer gathers energy also when you are flying driving around or stationary, so you can charge the Taurus Electro G2 also during the night with the energy that has accumulated during the day! **The Solar Trailer is patent-pending.**

SOLAR TRAILER

weather, it will still be charged and ready to fly by the weekend. The Solar Trailer® and Taurus Electro G2 are perfect companions and demonstrate how it is possible to fly free of charge, quietly and with absolutely zero emissions, with today's technology! Great for flying in remote places where electrical connections are difficult to get, as the Solar Trailer® functions as your power source also for conventional glider/ aeroplane operations. Let the Solar Trailer® be your base for flying everywhere!
